

Custom CVC Insertion Packs

Ensuring maximum barrier precautions

Reducing the risk of infection

Saving time and money

Our commitment to you

vygon@vygon.co.uk

www.vygon.co.uk

Customisation provides you with the ability to tailor-make a pack specific to your requirements, standardising insertion procedures and maximum barrier precautions, therefore reducing the associated risk of infection to the patient.

Reducing the risk of infection

The components available in Vygon's customised procedure packs have been specifically selected for their **high quality**, and in the case of sterile drapes to provide **maximum barrier protection** which helps to reduce the risk of infection to the patient.^(1,2)

Saving time and money

With the ever increasing demand to improve the efficiency of hospitals and utilise available time, custom packs help by reducing the number of stock items required for the procedure, thereby **decreasing waste, ordering costs and packaging**.

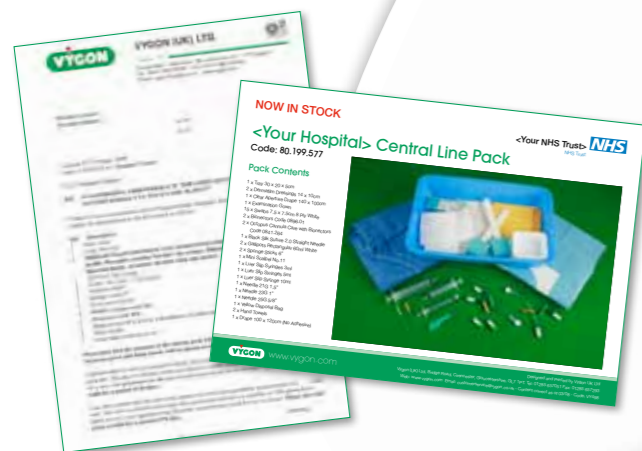

This in turn **reduces set-up time**, giving skilled clinicians more time for hands-on patient care.

Our commitment to you

A sales executive is also always on hand to provide any additional **training**, help and advice needed to ensure your pack is a success. In addition, on receipt of your initial order, a **support pack** will be delivered including contact details and posters of your new pack.

Your custom pack will be **tracked and monitored** throughout its journey to you by a dedicated sales support person here in the UK. This ensures **on time delivery** and **consistent supply** throughout its life.
